

INDIA'S OWN E-VOLUTION

IntelliSYS

The homegrown powerhouse redefining EPABX technology.

IntelliSYS is highly cost-effective because it comes with more built-in features. With VoIP capabilities and a complete Smart Communications (Mobile) client, it enables your business to function smoothly in every scenario. Your staff can use high-quality desk phones, pair their desk phones with their mobile devices, and use softphones on both PCs and smartphones. IntelliSYS is packed with features that run directly on the system, eliminating the need to purchase additional PCs, servers, or expensive operating systems. It is designed for both small and large businesses and can be used across the entire organization—from receptionists to customer support staff.

RECEPTIONISTS

Receptionists will work more efficiently with Caller ID displayed on their handset, allowing them to greet callers personally. The ability to see whether staff members are at their desks or away helps them manage calls more effectively.

OFFICE STAFF

Office staff will be more productive with built-in audio and video communication capabilities. They can conduct interactive conference calls with people inside and outside the organization, enabling quick and efficient sharing of ideas and information.

HOME WORKERS

Home workers will feel as if they are in the office. The KMT Mobile client lets them handle calls just like they would at their desk, ensuring they can receive any call from any network with ease.

CUSTOMER SUPPORT STAFF

Customer support staff will appreciate the auto-attendant capability. Calls will be routed to the correct department, ensuring the right team member receives the call.

IntelliSYS - SMART HYBRID COMMUNICATION

Powerful communication with smart features
